Work Experience

UX Engineer — Google, San Francisco, CA *(Feb 2025 - Oct 2025)*

- Worked with cross-functional teams in UX and Engineering to research, plan, and re-design an internal prototyping tool to make it possible for non-technical users (UX designers and UX researchers) to create functioning prototypes for testing new Youtube ads formats without requiring engineering hours.
- Built prototypes for Youtube Shorts for user research and added new functionality to prototyping tools.
- Stack: Lit framework, TypeScript, JavaScript, CSS, Figma.

Software Engineer — Waymo, Mountain View, CS *(Nov 2022 - Feb 2025)*

- Worked on the internal labeling platform for self-driving that delivered high-quality, low-cost, and diverse labeled datasets for ML teams at Waymo.
- Researched upcoming customer needs after increasing LLM capabilities and redesigned a new intuitive interface to allow non-technical and technical users to self-label and auto-label Waymo data.
- Simplified an existing complex label requesting workflow into a multi-step form with clear documentation and guidance to onboard new users faster and with less engineering involvement.
- Served as a primary point of contact between engineering (AI researchers and ML engineers) and internal customer teams (labelers); translated user feedback into prioritized product changes and rollout plans.
- Worked with customers on the India labeling team to build out an intuitive, faster method for verifying the accuracy of labels and responding to feedback.
- Stack: Angular, TypeScript, CSS, C++, Python, Figma.

UX Research (20%) — Waymo, Mountain View, CS *(Aug 2023 - May 2024)*

- Interviewed customers, analyzed and visualized 4-week diary study results, and put together a final presentation for a Pickup/Dropoff user study for the Waymo ridesharing service and app in SF and Phoenix.
- Synthesized qualitative and quantitative feedback into actionable product recommendations.
- Stack: Colab, Python, PlotLy, SQL.

Analytics Engineer — Nuro, Mountain View, CA *(March 2021 - Oct 2022)*

- Researched, owned, and implemented a plan to overhaul the organization of pipelines, data lakes, and workflows used by cross-functional teams using Dataform. Consolidated data sources and wrote extensive documentation and guidelines to make data understanding, analyzing, and debugging much easier.
- Owned scripts and dashboards for monitoring Cost Per Mile metrics, referenced weekly by operations leads.
- Also worked on scheduling tools, job monitoring, and resource efficiency improvements supporting ML teams.
- Stack: Go, Python, Javascript, Airflow, SQL, BigQuery, GKE, Kubernetes.

Software Engineer — Google, New York, NY *(October 2018 - March 2021)*

- Worked with ad buying customers to research, build, and launch a logistics regression model predicting display ad callout quality to throttle low-value excess callouts, generating \$80MM ARR. Implemented all serving changes, training data pipelines, monitoring dashboards, and the ML model in TensorFlow.
- Conducted and presented a thorough data analysis to uncover the cause of unfilled impressions, which transformed into researching and building an ongoing multicausal detection model for mobile app ads.
- Stack: C++, SQL, Python, Pandas, TensorFlow, JavaScript.
- Interviewed engineering candidates (L3/L4/intern), served on the Hiring Committee, and mentored an intern who later joined full-time.

Education

Williams College, Williamstown MA — B. A. Economics and Computer Science *(2014 - 2018)*

- GPA: 4.0 out of 4.0 (Phi Beta Kappa Honor Society)
- TA'ed Introduction to Computer Science and Data Structures, tutored Linear Algebra.
- Co-founded UnICS, an organization for underrepresented identities in CS, and ran a mentorship program.
- Enrolled in MIT Spring 2017 as a study away program, in EECS.
